

POKER ESTIMATION

AIM:

Create Poker Estimation for the user stories - Music Playlist Batch Creator Project.

PROCEDURE:

- **Distribute Cards:** Each team member receives a deck of cards with values. Most teams use the **Fibonacci sequence** (0, 1, 2, 3, 5, 8, 13, 21, etc.) to represent story points.
- **Read the Story:** The Product Owner (PO) describes a user story, its requirements, and its **Acceptance Criteria**.
- **Clarify Details:** The team discusses the story. Developers ask questions about technical complexity, risks, and dependencies to ensure everyone understands the scope.
- **Estimate Privately:** Each member picks a card representing their estimate and places it face-down on the table. This prevents **anchoring**, where people simply follow the lead of the most senior person.
- **Simultaneous Reveal:** All participants flip their cards at once.
- **Discuss Outliers:** If the estimates vary significantly, the people with the highest and lowest scores explain their reasoning. This often uncovers misunderstood requirements or hidden technical hurdles.
- **Re-vote for Consensus:** After the discussion, the team votes again. The process repeats until the group reaches a consensus on a single number.
- **Record the Estimate:** Once agreed upon, the story point value is recorded in the **Azure DevOps** work item.

Poker Estimation:

The screenshot displays the Azure DevOps Planning Poker interface. The left sidebar shows the navigation menu with 'Event Management SC' selected. The main area is titled 'test' and shows a game in progress for 'Register Vendors'. The current item is 'Register Vendors' (USER STORY 47). The game state shows 'Participants: 1', 'Voted: 0', and 'Share game' and 'Become spectator' buttons. A 'Reveal' button is visible. The game board shows a sequence of numbers: 0, 1, 2, 3, 5, 8, 13. Below the board is a 'Reference items' section. The 'Game scope' table lists work items:

Work item	State	Esti...
Secure Registration USER STORY 9	New	2
Design registration UI form TASK 10	New	-

The right sidebar shows the details for 'Register Vendors' (USER STORY 47), including the description: 'As an admin, I want to register vendors under categories (Food, Music, Decoration), so that organizers can book them.'

RESULT:

The Estimation/Story Points is created for the project using Poker Estimation
